Part 15: JTAG Debug Port

The 10-pin JTAG interface is reserved on the AXU2CGA/B board for downloading ZYNQ UltraScale+ programs or firmware programs to FLASH. The pin definition of JTAG is shown in the figure below

Figure 15-1: JTAG Pin Definition

Part 16: DIP Switch Configuration

There is a 4-digit DIP switch SW1 on the FPGA development board to configure the startup mode of the ZYNQ system. The AXU2CGA/B system development platform supports 4 startup modes. The 4 startup modes are JTAG debug mode, QSPI FLASH, EMMC and SD2.0 card startup mode. After ZU3EG chip is powered on, it will detect the level of (PS_MODE0~3) to determine the startup mode. The user can select different startup modes through the DIP switch SW1 on the expansion board. The SW1 startup mode configuration is shown in the following table 16-1.

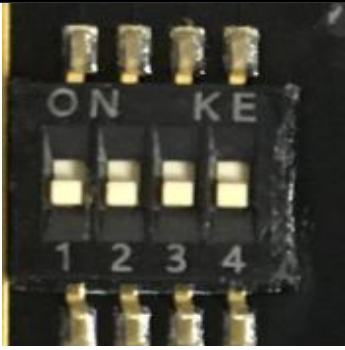

SW1	Dial Position (1, 2, 3, 4)	MODE[3:0]	Start mode
	ON, ON, ON, ON	0000	PS JTAG
	ON, ON, OFF, ON	0010	QSPI FLASH
	ON, OFF, ON, OFF	0101	SD Card
	ON, OFF, OFF, ON	0110	EMMC
